

Savings for your bottom line — and the planet

Every time you collect a device for reprocessing, you can help make healthcare sustainable. And when you buy reprocessed devices, you can invest the savings into more patient care programs. Together, let’s continue to **grow green.**

Quarterly environmental impact and savings
(detailed on a monthly basis in your Sustainability Value Report)

How Sustainable Technologies™
diverts waste from landfills

Through our waste-to-energy model, devices that cannot be recycled are transported to a waste-to-energy facility — not a landfill. The waste is incinerated and the combustion generates steam for electricity production. For every ton of waste processed at this facility, we can reduce greenhouse gases by up to one ton.‡

* Pounds of used devices collected.
† Regulated medical waste.
